CryptoLocker - You're infected – if you want to see your data again, pay!

Don't ignore this email!

Despite the pictures we have used, this is not a joke or a scam. It will take 2 minutes of your precious life but it will save your business, thousands of pounds and many days of work, stress and frustration! No, we are not selling anything. We, at **Oxford IT Support** are firm believers that knowledge comes free.

What type of threat is this?

There's a big threat wiling around on the Internet right now: A particularly nasty piece of ransomware called **Cryptolocker**. Many, many organisations and home users are being infected with this malware every minute, everyday and sadly there is no way to avoid it and no solution to date to repair the damage once you've been infected.

What is Cryptolocker then and why is this new virus so destructive?

Instead of us filling up pages on this e-mail, detailing the technicalities, we advise you perform a quick search on Google in regard to this virus called Cryptolocker. We have collected a few links for your convenience just in case, safe and checked by us in advance:

[Sophos](#), [Arstechnica](#). Even better, watch a short movie where experts are dissecting this virus on [Youtube](#) or even check it on [Wikipedia](#).

Got it? The final truth is that nobody will ever be able to retrieve their files.

NOTHING, NEVER AND NOBODY will ever be able to restore the files and photos once encrypted. Sad isn't it? Time to close your business and go home. All of you. For good. Or time to explain your wife that the wedding pictures are all gone. Forever. Get married again? That is a possibility but for sure not with the same person.

Then what's to be done? Well...thanks God, there is a way to prevent it.

Oh, now that you are well aware of Cryptolocker, would you like to hear something about Operation Hangover? Hm...Google is your best friend. Time to do your homework! If anything, do not hesitate to email us back or even give us a call, we are always here to help. Remember, **PREVENTION** is paramount nowadays.
